

TMC Enterprises Comments on ENERGY STAR Program Requirements for Residential Light Fixtures Draft 2 Eligibility Criteria – Version 4.0

As my company is developing professional work lights that now use LED's as the primary light source, I believe that the EPA should implement LED technology as EPA approved as soon as possible. In their nature, LED's are much more efficient in producing light than a fluorescent or an incandescent light. I believe the EPA could establish an easy measurement for LED's by establishing a standard for lumens produced per watt used (the standard could be based on current fluorescent outputs).

Best Regards,

Sean Miller
